Patent Claims

- 1) A composition comprising 0.001 to 3% of tiotropium, or a pharmaceutically acceptable salt thereof, in admixture with a physiologically acceptable excipient having an average particle size of 10 50 μ m, a 10 % fine content of 0.5 to 6 μ m and a specific surface of 0.1 to 2 m²/g.
- The composition according to claim 1 wherein the tiotropium is present as a salt in the form of the chloride, bromide, iodide, methanesulphonate or paratoluenesulphonate.
 - The composition according to claim 1 wherein the physiologically acceptable excipient is selected from the group consisting of the monosaccharides, disaccharides, oligo- and polysaccharides, polyalcohols and salts, and combinations thereof.
 - 4) The composition according to claim 3 wherein the physiologically acceptable excipient is selected from the group consisting of glucose, arabinose, lactose, saccharose, maltose and trehalose, optionally in the form of the hydrates thereof, and combinations thereof.
 - A method for preparing a pharmaceutical dosage form for treating respiratory disease, COPD and/or asthma comprising introducing the composition according to claim 1 into a capsule suitable for delivery of the composition to a patient by inhalation.
 - 6) A capsule containing the composition according to claim 1 in powder form.
- 7) The capsule according to claim 6 consisting essentially of one or more synthetic plastics.

10

- 8) The capsule according to claim 7 wherein the synthetic plastic is selected from the group consisting of polyethylene, polycarbonate, polyester, polypropylene and polyethylene terephthalate, and mixtures thereof.
- A capsule suitable for delivering a composition to a patient by inhalation comprising about 1 to 20 mg of the composition according to claim 1.
 - 10) An inhalation kit comprising the capsule according to claim 6 and an inhaler which can be used for administering inhalable powders from powder-filled capsules.
- The inhalation kit according to claim 10 wherein the inhaler comprises a housing containing two windows, a deck in which there are air inlet ports and a screen secured via a screen housing, an inhalation chamber connected to the deck on which there is a push button actuating two sharpened pins and movable counter to a spring, a mouthpiece which is connected to the housing, the deck, and a cover via a spindle to enable it to be flipped open or shut, and airholes for adjusting the flow resistance.
